Frequently Asked Questions

I belong to an electronics and communication background. I have learning in VLSI and embedded programming but I am new to ESBs or any other object-oriented programming language. Should I be taking this course?

The course crafted at EDUCBA takes into consideration all the people pouring in from various backgrounds and still be able to cope up with the course material. You do not have any experience or background related to computer programming, so this can be quite challenging but not impossible as you still do have a good experience of VLSI and embedded programming.

Do I need to keep practicing the contents being taught in this Mule ESB Tutorial or is it a one-off thing?

The course contents are designed in such a way it consists of a perfectly mixed blend of theoretical concepts and programming part. The former can be considered to be a one-off thing as it is just about building the fundamentals and the theory of the Mule ESB Tutorial whereas the latter targets the programming part which is therefore recommended to be practiced at regular intervals so as to not lose touch of it.
